

**SUPERIOR TECHNOLOGY.
EASIER APPLICATION. BETTER PERFORMANCE**
**HECK, EVEN OUR
BUCKETS ARE BETTER.**

Backed by six generations of technological improvements, Stauf's One-Step SMP-960 is a step above other adhesives. Its nonflammable, ozone-friendly formula is polymer-based, offering a number of advantages over typical urethane-based adhesives. It protects against moisture while reducing noise. And its non-slump formula allows ridges to bridge gaps between the wood floor and sub-floor, making installation a breeze. Plus it contains no water, solvents, or isocyanates. So it works like a urethane and cleans like a solvent. All this, inside every specially-designed bucket of Stauf adhesive.
