

NASSFLEX IT!

Adhesive Direct Over Sealer

SEALER (ERP-270) + ADHESIVE (D737)

NASSFLEX

Introducing the NassFlex system from Stauf. NassFlex is a 2 part epoxy (ERP-270) and adhesive (D737) used in conjunction for an impermeable vapor barrier and adhesive system for VCT, LVP, LVT, Vinyl sheet goods, Rubber flooring and more. There is no need to apply primers or leveling compounds in between coats. Just apply the sealer and the adhesive can be applied directly over the sealer. While ERP-270 (25#'s or 100%RH) is known for its moisture mitigation properties, it's the first time that a sealer and adhesive have been paired together for all flexible flooring products. NassFlex is all you need to mitigate moisture under your flexible installations. NassFlex from Stauf . . . Simplifying the way you install again!
